# ONEDEN

The ONEDEN company was founded in 2022 and is located in Incheon, South Korea.

With sophisticated equipment as well as the latest manufacturing technologies, ONEDEN will provide a whole new family of cutting tools such as End Mills, Drills, and Burrs for the dental industry.

These state-of-the-art products are geared for the manufacturing of dental prostheses through CAD-CAM machines.

The tools will be specifically built under proprietary know-how for adequate geometry and edge prep to give the best performance for each machine and material (PMMA, Glass Ceramics, Zirconia, Cobalt Chrome, and Titanium).

In addition, ONEDEN is using newly developed coatings, and various grades of Carbide raw materials to match requirements.

Outstanding quality is the drive of ONEDEN.

A team of Dental Tool Application specialists is in place and committed to provide the best technical support in selecting the right product for the application.

***There is no doubt that ONEDEN will become a key player in supplying tooling for the Dental Industry.***

## Advantage of 3 flutes versus 2 Flutes in Zirconia.

The difference between Metals (Cobalt Chrome, Titanium), PMMA, and Zirconia is that in the Milling operations of Metals and PMMA, we are creating chips and in Zirconia we are creating powder.

If we are using the same feed on 3 flutes in Zirconia the advantage will be getting a smoother cut with less load and much better tool life.

If we run the same chip load, then the feed rate will be 33% faster.

## Coating

ONEDEN is producing tools using state-of-the-art manufacturing equipment together with the latest coating technologies. We provide PVD and CVD (Diamond) Coating.

We also use the most advanced technology in Electroplating while using diamond grit which offers an excellent binding to avoid micro-cracks and reduces the sensitivity to thermal impact.

In PVD Coating we are using our TS Coating which has a specific advantage for Cobalt Chrome and Titanium materials.

For the Zirconia we are using Diamond coating, while for PMMA and Plastic, we are using DLC (Diamond Like Carbon).

For Glass Ceramics, we are using Electroplated Diamond.

## Technical Questionnaire

\*Company: .....  
 \*Contact: .....  
 \*E-mail: .....  
 Phone: .....

\*Machine Type: ..... CAM System: .....

\*Material:  
 Cobalt Chrome     PMMA / PEEK     Zirconia (ZrO<sub>2</sub>)     Glass Ceramics  
 Titanium     WAX

\*Dimensions:  
 Cutting Diameter d1: ..... mm    Overall Length l1: ..... mm  
 Shank Diameter d2: ..... mm    Length of Cut l2: ..... mm  
 Neck Diameter d3: ..... mm    Neck Length l3: ..... mm  
 Radius r: ..... mm    Length of Shank Connection l4: ..... mm

\*Profile:  Ball     Toric     Flat

\*Coating:  Coated     Uncoated    Coating Type: .....

\*Shank Design:

- Cylindrical Shank 
- Cylindrical Shank with Clamping Flat 
- Cylindrical Shank with off-set Neck 
- Cylindrical Shank with Bronze Ring 
- Cylindrical Shank with Synthetic Ring 
- Cylindrical Shank with Snap Ring 
- Cylindrical Shank with Steel Ring
